e Cour d'Alene district in Idaho is on the increase. Lately several ers and mining experts from Butte, of them employees of the Amalgamated. visited the holdings of the company, in the enterprise, the shares being worth e neighborhood of \$3.40. The reports ring back of the conditions at the mine-he showing of ore prove that the mine-her than most of the holdings of the companies in Butte, probably being than the showing of any mine other the North Butte property. Many inries concerning the mine have been rehere from financiers in Boston and

according to the reports of some of the malgamated engineers and experts who nt to the mine to satisfy themselves of the conditions there is more than 2,000,000. erhaps as much as 5,000,000 tons of first class per ore blocked out in the mine. This immense body of ore can be extracted, owing to the tunnels reaching the stopes, at a cost of about \$1 per ton, which is \$2 less than the ost of extracting ore in the large es of Butte.

vein has been opened to a depth of to the mountain. The faces of all the rifts are in pay ore. The vein is 125 feet ide at the lowest level and has been opened that point for about 800 feet by drifts, enwern runnels No. 2 and No. 3 the vein sixty feet wide and assaya from 10 per ent. 10 30 per cent. copper. The rest of the line shows assays averaging about 4 per line shows assays averaging about 5 per line shows assays averaging about 4 per line shows assays averaging about 5 per line shows a say of the line shows shows assays averaging about 4 per The richest copper ore carries seven sof silver a ton beside the copper, and set of the ore is likewise rich in the white. On the lowest level the ore does in as high in copper as above, but the gexperts are inclined to believe that s largely due to a leaching out by the which flows through the vein matter reat quantities on that level. It is the probable that the leaching action e water has carried the copper away leposited it lowes in the vein as copper e. In anticipation of this being found a fourth tunnel is being driven further the mountain, which will tap the vein lepth of 2,000 feet.

n the mountain, which will tap the vein depth of 2,000 feet. The company has erected aerial tramps of the company has erected aerial tramps of the company has erected aerial tramps of the company has expected aerial tramps of the company has been to the ore from the mine expected plant, which handles 250 tons per day, about 90 per cent. of the copper in the Besides the mineral land which the compowers it has taken up a large amount of hand timber land and is able to bring mine timber to the workings for three per foot from its own forests. It has completed a water flume supplying all water needed and has built a wagon from the mouths of the upper tunnels to railroad, about three miles away. It here millsites and has erected an electric and power plant.

D. Greenough of Spokane and his asso-es own this property for the most part, well as the adjoining claims of the Snow e group, which will be opened up in the future from the workings of the Snow m. Last month the Snow Storm com-ydistributed \$90,000 in dividends, and the ager is confident that when the concen-ter plant is running and the mine gets manager is confident that when the concentrating plant is running and the mine gets full working force the dividends will amount of 1,000,000 per year. Betimbering of the West Colusa shaft has seen completed and the mine is again in peration, sinking being prosecuted with the lew of carrying the shaft down to the 2,000 to level immediately, a distance of 400 feet eyond its present depth. With this mine unning at full blast the Coalition will be obsting in the neighborhood of 5,000 tons more force per day which is about 1,500 tons more

of ore per day, which is about 1,500 tons more than the Great Falls smelter can handle. The surplus will be sent to the Washoe, at Anaconda.

The Pollock mine, belonging to the Butte Milwaukee, which is under the control of the Butte and New York Company, has struck the vein at a depth of 250 feet and has not reached the hanging wall of the vein with the crosscut. Ore in the vein runs high in silver. The permanent board of directors of the Butte and New York will consist of the following: James A. Talbot, president; Harry A. Mittenthal, New York, vice-president; B. Binnard, Butte, secretary; Leo Schlessinger, New York, treasurer.

CTAH.

SALT BAKE, Nov. 6.—Dividends paid by mining companies operating in Utah in betober aggregated \$506,300, as follows: United States Mining Company, \$366,630; Silver King, \$50,000; Beck Tunnel, \$30,000; Mammoth, \$20,000; Grand Central, \$15,000; Victoria, \$10,000; Carisa, \$5,000; Sacramento, \$5,000; Utah Mine Company, \$5,000.

The Columbus Consolidated Company, operating at Alta, in the Little Cottonwood district, has after a year's driving through virgin ground and for a distance of more than 1,500 feet, opened up the second great contact vein in its property. The ore body has been penetrated for forty feet and its width is still unknown. Since returning from the East the manager has not had an opportunity to inspect the new strike and for that reason it is not yet possible to get official information coheerning it.

Col. W. C. Greene, president of the Greene Consolidated company, and a party of other officials of the same corporation came down from Butte on Monday and proceeded south at night. It had been the intention to make an inspection of the smelters here, but stormy weather decided the party to continue its journey.

A strike of sensationally rich silvanite UTAH.

tracy.

It strike of sensationally rich silvanite it tellurium ore has been made in the State edistrict, near the southwestern boundary of Utah. Arrivals from the camp say it the ledge carries twenty inches of ore it is worth more than \$5,000 a ton in gold laylyer. Heinze, who has been spending some

Lower Mammoth Company, operating tic, has just placed an order for a new to hoisting plant that will be the largest lost complete of its kind in the State. It is seen will be of 100 horse-power and have e drums capable of working independence of each other and upon which 2,000 of cable will be wound. The mine has speed hig ore bodies to a depth of 1,700 of the company is preparing to operate

oped big ore bodies to a depth of 1,700 and the company is preparing to operate i extensive scale.

Hannapah Company, operating at apah, Nev., a few miles from Tonopah, buthorized the sale of \$250,000 worth of a market for which had already been ded. The company is a local organiza-and has a valuable property. Its reses became exhausted before it was ble to get the property fully developed, sinking a winze from its 700 level to conwith the large contact vein at still greater that the tittle Bell Company of Park City inconnered three feet of rich ore making not the bedding planes of the lime overthe vein. It is considered a most fleant strike, in that it establishes the eess of the vein from which the ores

were shipped out of the Tintic district to smelters in this valley in the past week. NEVADA.

NEVADA.

NEVADA.

NEVADA.

College of the sensation of the week in this camp of sensations has a the strike on the 400 foot level of Conbision Traction Company's ground. Ore sencountered several days ago, but the was carefully guarded. It now develops trock carrying thousands of dollars in d to the ton has been uncovered and that average of the mass will rank as high de shipping ore, ore that will go anywhere m from to \$300 a ton. The company owns when ten acres of ground, but that is conserved plenty in which to develop a bonanza

mine. Within a week the price of Combination stock has jumped from \$2 to \$4 a share.

Wonderfully rion strikes are being reported from the Rosebud district in the southern portion of the Jackson range in Humboldt county. Goldfield and Tonopah operators are pulling out for the new Eldorado and there is a belief that a genuine boom is being worked up in the northern country. The original strikes were made by men who were early in the game at both Tonopah and Goidfield and the cres which are beginning to make their appearance here are considered by mining men as being the right kind of stuff. The new district is about thirty miles a little west of north from Humboldt House on the Southern Pacific, and a town has been established that will be known as Powhatan. Some of the ore shown here is filled with ruby and horn silver and carries high value in gold as well. From another great ledge in the same region ultra gold ores are found and the claim is made that from either ledge it is possible to knock off rock in any quantity that will run \$200 to \$300 a ton. Salt Lake men have gots strong foothold in the camp, but to didfield and Tonopah talent will be in up to their ears in no time if the reports on investigation are verified.

Reports from Rhyolite are to the effect that ores are beginning to go out over the Clark road, and the assertion is made that a considerable tonnage of accumulated rock will be shipped without waiting for the building of the line from Beatry to Rhyolite, work that is under way, but which will hardly be finished for several weeks, owing to the lack of material. Ground has been broken for the new milling plant at the Montgomery-Shoshone and structural material is now headed for camp.

Charles M. Schwab, accompanied by D. B. Gillies and other members of his staff, came into Builfrog from Las Vegas Monday night. They are now reported to be making an inspection of interests in the Greenwater country. That completed, the Montgomery-Shoshone and other properties controlled by the Schwab syndicate at

LAKE SUPERIOR COPPER. CALUMET, Mich., Nov. 17.—The Michigan copper country is now enjoying a substantial boom, and it is therefore an opportune time to look back upon the fruits of the last boom and determine analytically what has become of the properties promoted at that time. That a high degree of success has followed the mining promotions of 1898-99 on Keweenaw peninsula is apparent to any one in the least familiar with the situation, but it is doubtful if many stop to figure out just what this degree of success is.

Going over the list it will be found that there were twenty-five mining properties on Keweenaw peninsula either newly organized to copper mining at that time. Adventure, Arcadian, Arnold, Ashbed, Baltic, Centennial, Chanpion, Elim River, Franklin Junior, Humboldt, Isle Royale, Mass, Mayflower, Meadow, Mesnard, Mohawk, Michigan, Old Colony, Phoenix, South Kearsarge, Rhode Island, Trimountain, Victoria, Winona and Wyandot. With the opportunity for a seven year tryout they are all active at the present time except five, the inactive ones being the Arnold, Humboldt, Meadow, Mayflower and Phosnix.

Of the twenty active ones remaining all are producers except six, those still remaining in the prospective state being the Arcadian, Ashbed, Elin River, Old Colony, Rhode island and Wyandot.

Of the fourteen producers in this list six have attained positions that are "eminently respectable," as they are in the dividend class or are profitable factors of dividend paying companies. These are the Baltic, Champion, Mesnard (Quincy), Mohawk, South Rearsarge (Osceala Consolidated) and Trimountain, and those whose ability and Minona, and those whose ability and the supporting is not yet fully demonstred, which are the Adventure and Victoria.

A recapitulation then shows that of the twenty-five companies which were in their infancy seven years ago, five have discontinued, six of the remaining active ones have not dislovered bayground, two are shipping but have not fully assured their future, six are shipping from lodes that property wi

Total 225,000,000

This approximation does not pretend to be exact—some of the figures may be 1,000,000 pounds too high or too low. In fact, several of the mines enumerated will average an output of nearly 1,000,000 pounds each per month, so that a few months more or less in the time fixed for terminating the estimate would make considerable difference in the result. But the object of the table is to present a picture representing development that had its start in the new work inaugurated during the last eight years.

The copper production from that source alone—225,000,000 pounds—since the work began is approximately the equivalent of a year's output from the entire district. At the average price that has preveiled during the period it has brought the companies at least \$35,000,000. That is surely a fair reward for the assessments paid in on these same companies, which aggregate less than \$20,000,000. The best of these properties are yet in their infancy, and several of the minor ones give promise of rivalling the success already attained by the dividend payers in the list.

BISNEE, Nov. 6.—The Hoatson shaft of the Superior Pittsburg mine will be a shipper long before the Briggs of the same company, though the latter has been three years longer in development than the former. Hoatson is only about 18 months old, but it is 1.285 feet deep, and has developed on its 1.185 foot level—called the 1.000 foot—a block of orethat is several hundred feet long and nearly 200 feet wide. This is apparently all ore, and it runs from 5 and 6 per cent up. On the 100 feet beneath the company is driving a series of drifts similar to those that have developed this ore, and in starting the work last week cut excellent ore close to the shaft. There is little doubt that the 1.100 foot drift will find this ore in quantity 100 feet below where it has been exposed on the 1,000.

Development in the Bisbee camp has been suspended for some weeks on account of the shortage of fuel oil, there having been a very serious deficiency in oil tank cars. But this has been remedied and sinking has been resumed at the Junction, Cole and Briggs of the Superior and Pittsburg, the Cuprite and Sacramento of the Copper Queen and the Denn and Saginaw of companies of those names. The Junction is to be sunk 200 to 400 feet, the Briggs 200, the Cole 200, the Sacramento, and the Denn at least 200. The district is becoming more and more understood, and as knowledge is gained the possibilities at further depths, such depths as had before never been considered possible here, are more fully seen. That the Bisbee camp has possibilities for copper at depths that are simply astounding is the verdict of engineers who are fully conversant with recent developments here.

The directors of the Calumet and Arizona and assagniated commanies have been never been considered here. BISBEE, Nov. 6.—The Hoatson shaft of the

The directors of the Calumet and Arizona and associated companies have been puzzling over the added smelter capacity required for the Superior and Pittsburg, and have wondered if they would not be forced to erect a new plant. But the decision has been made to add to the present works and in such a way that the new capacity will cost comparatively little, while it will give a works modern in every way and capable of making copper at the lowest price, which shall have a capacity for more than 3,000 tons of ore daily. This will be ample for the mines for a long time to come and will mean the production of more than 100,000,000 pounds a year. Work on the additions has commenced in the

FURNACE CREEK SOUTH EXTENSION COPPER COMPANY

OFFICERS AND DIRECTORS

Hon. JOHN SPARKS President | L. M. SULLIVAN Treasurer Governor of Nevada

Prest. L. M. Sullivan Trust Co. J. L. LINDSAY Secretary C. B. KINGSBURY Vice-President Cashier State Bank & Trust Co. Formerly half-owner of Anaconda JOHN D. CAMPBELL Consulting Engineer

The Furnace Creek South Extension Copper Co. consists of six claims adjoining Clark's Furnace Creek Co. at Greenwater, known as Copper Shoe, and Copper Shoes No. 1 and 2, Anxiety, and Anxiety Nos. 1 and 2, in all about 120 acres. John D. Campbell, Consulting Engineer, reports as follows: "The great copper ledge traversing the Copper Blue and Copper Matte claims of the Clarke holding has been disclosed at surface on both the Anxiety and Copper Shoe groups, and has been traced for a distance of 4,500 feet on the acreage. These croppings are clearly defined, and cut through the formation with the directness of a railroad track. On the Furnace Creek Estate this belt of ore shows 48 feet of 21 per cent. copper ore. Thirty per cent. copper has been found on the surface, and no ore of lower grade than 10 per cent. in copper values has been encountered down to the lowest level. It is my opinion that it should develop into one of the greatest copper producers of the Greenwater

850,000 shares ownership stock pooled and not for sale.

The subscription books are now open, and close Nov. 24, 1906. Each subscription must be accompanied by deposit of 25 per cent. of the

amount of the subscription, and the balance due on delivery of stock about Dec. 5. In the event of oversubscription allotment will be made pro rata. The stock of this company will be listed on the San Francisco Mining Exchange and the New York Curb.

We believe this to be the best prospect in the Greenwater district.

270 feet and the formation is becoming mineralized, indicating the proximity of the ledge.

ordering of new machinery and two additional furnaces of 450 tons capacity each will be undertaken in a few months. Machine shops, engine and boiler houses will be of the most modern and labor saving type and will be started at once. It is expected that for the coming year there will be an average furnace capacity in blast of about 1,500 tons a day. A fourth 300 ton furnace is being blown in now, and a fifth will start shortly with the blocking out of ore on the 1,100 foot level of the Hoatson shaft.

Copper production at Bisbee for October was 6,200 tons; at Clifton, 3,300 tons; at other camps of the territory enough to make its total 12,450 tons. In addition to the increase at the Calumet and Arizona above referred to the Copper Queen is adding a tenth furnace, the Arizona Smelting Company is putting in a reverberatory furnace, the United Verde is adding to capacity somewhat and the mines of the Tucson district are preparing for matter and converter smelting. The territory should make 325,000,000 pounds of copper during 1907.

Colorado Springs, Nov. 9.— The strike in RAPID CITY, Nov. 6.—Encouraging reports come from the district about Pactola, which for many years has been practically idle. The renewed interest is due largely to the Missouri River and Northwestern Railroad, which has opened up the district and which has made it possible for the owners to ship in necessary material at reasonable prices. J. C. Sherman, who has been associated with the mining interests in this district for the last twenty-five years, is closing a deal with New York people. This deal includes several claims upon which valuable copper ore has been discovered. The property has been sufficiently developed to prove the existence of large bodies of ore. P. B. McCarthy of this city is working a force of men constantly on the Tamarack group of claims, also near Pactola. He is running a tunuel to tap at a depth of 350 feet the ore body which crops out on top of the hill. This is a large body of free milling ore, and is located conveniently to the railroad and the creek.

Spearfish, Nov. 6.—The organization of two new mining companies on Iron Creek speaks well for the regard in which that dstrict is held by mining men. The Queen Esther Mining and Development Company, organized through the efforts of W. W. Connor of Niles. Ohio, has just received its charter and will commence active development work at once. It has ample finances to give it a good start and owns 380 acres of ground about two miles from the Burlington station at Iron Creek. It is capitalized at \$1,250,000, with shares of a par value of \$1 each. The stock is held principally at Niles, Ohio. Development work already done on the ground shows a good body of cyaniding ore which will run about \$4.50 a ton.

BRITISH COLUMBIA. territory should make 325,000,000 pounds of copper during 1907.

COLORADO.

C

BRITISH COLUMBIA.

body carrying \$15 a ton overage value. This mine is looking well and promises to become a regular shipper soon.

The large dump of the South Clara D. mine, on Gold Hill, which is being treated by the Anaconda cyanide mill, is yielding \$6.80 a ton. The cost of treatment is nominal. The same process is being used on the dumps of the leading Cripple Creek mines with equally good results.

The great Camp Bird mine near Ouray, Col. which was closed last winter by a snowslide which destroyed the mills, will be opened soon. The mills have been rebuilt on the site of the old ones.

Shipments of black copper ore, 32 per cent copper, are being made from the Iron City mine, Ouray district, to the Gilverton smelter. The ore closely resembles that opened some time ago in the Gennesse-Humboldt mine, from which good results are being obtained. Great activity is everywhere manifest at the mines of the Clear Creek and Gilpin Tunnel Company, and from present indications the straightening of the tunnel bore and the installation and equipment of new machinery and power facilities will be completed within the next two or three weeks.

A 250 horse-power plant is now ready to start work on the rich ore bodies belonging to the company when the flume now being constructed is available for use. A full set of Temple electric drills are continually at work and have during the last few months opened up several veins showing values far in excess of any previous discovery in the district.

A party of Eastern reporters and business men visited these properties last month. COTTONWOOD, Nov. 3.—The Slough Creek Limited Mining Company is putting in, in addition to its pumos, a big skip and drum which will hoist a million gallons a day.

The Cariboo Consolidated of London, operating on Lightning Creek, and with the Great Cariboo of New York owning all the stream, is now taking out 37 ounces, about \$1,030, to the sett covering about thirty-rich pay, but many stretches of the stream have produced 140 ounces or \$2,500 to the sett. Bett. Lightning Creek operations are looked forward to with more interest than any other work in the district.

LAKE REGION IRON MINES.

Great activity is everywhere manifest at the mines of the Clear Creek and Glipin in the district. Company, and for the tunnel bore and the state and the transport of the tunnel bore and the state allation and equipment of new machinery and power facilities will be completed within the next two or three weeks.

A 250 horse-power plant is now ready to start work on the rich ore bodies belouting to the company as a vallable for use. A full set of Temple electric drills are continually at work and have during the last few months opened up several veins showing values far in excess of any previous discovery in the district.

Barty of Eastern reporters and business men visited these properties last month among them E. C. Roew. These gentlement apparently took extra time and pains to investigate the entire holdings of the company at the conclusion of which, much to the gratian feation of the surpressed that the ore bodies owned were marvellous in extent and richness and that the enterprise was stupendous in that it not only developed the company own properties at depth but would open up over 1,000 ofter known veins in the distinct.

SEATTLE, Nov. 5.—A find of free gold at Trout Lake in the White Salmon district is attracting considerable attention, which can be crushed easily and the gold extracted. Some showing now is a large body of sliphide ore with bornite and chalcopyrites of coppers. The United Shaft at Chewalah if down 175 feet. The ore body was so feet wide, with an above in now will begin soon and a big shipment is to be made for smelter test. The Chewalah district has remarkable surface copper showings, but it is not yet in a selled to the company as howing now is a large body of sulphide ore with bornite and chalcopyrites of coppers. The United Shaft at Chewalah if down 175 feet. The ore body was so feet wide, with an expected the season of the company of the season of the contract of the lakes as the order of the lake regio

4427 Chestnut St., Philadelphia, Pa

of the iron and steel industry to-day, is responsible for the greater part of the prosperity and increased volume in the iron ore industry. With the closing up of the hill deal in iron lands and the withdrawal of them forever from the market, since they have passed into the hands of the Steel Corporation, the people interested in the iron and steel business have suddenly realized that the Mesaba Range is now pretty well measured and in the hands of consuming companies and that other iron fields must be considered at no distant day by those concerns that have not already acquired large ore reserves. Apparently the Republic Iron and Steel Company was the first to consider this, or at least the first to act, for it is learned that the company is closing for a tract of iron land in Alabama that is estimated to contain 75,000,000 tons of low grade ore. The deal is said to involve \$800,000. The price reminds one of the early day considerations for some of the Mesaba ore lands. The Republic Iron and Steel Company is said to not have as much Northern ore as it would like to have there there are a six would like to have there in ore as it would like to have there in ore as it would like to have there in ore as it would like to have there in ore as it would like to have the early ore as it would like to have there in ore as it would like to have there in ore as it would like to have there in ore as it would like to have there in ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would like to have the early ore as it would li Company is said to not have as much North-rn ore as it would like to have, though it

CANADA'S SILVER CAMP.

Good Prices Even for Prospects-Record

Month of Shipments. COBALT, Ont., Nov. 9 .- Regardless of the fact that several recent transfers of mining properties have been made here at prices which would have seemed fabulous four months ago, there is every indication of an increasing desire on the part of capitalists both from Canada and the United States to pay asking prices for any claims which give promise of ore values.

It is reported on what seems to be excellent

authority that the Timmins and McMartin people, owners of the La Rose, have just purchased the University mine on Giroux Lake for \$1,000,000 and are now negotiating its sale to New York capitalists at \$1,500,000 The University is one of the good mines in the Giroux Lake district. It consists of fifty-six acres, eleven of which are under the waters of the lake, is now working three veins and has shipped several carloads of first class ore. Another sale in which the Timmins brothers and their associates were principals is that of the Red Rock claim. Controlling interest of this property has passed to a syndicate of Toronto business men, at the head of which is E. A. Osler, a broker. It is reported that because of certain recent development work on the property the former owners were not anxious to have the option taken up but that the \$25,000 check which it was agreed should bind the bargain arrived before the expiration of the time limit and had to be accepted Some ore has been sacked on the Red Rock, but as yet no shipments have been made. It is said that one of the veins of the Green Meehan property has been traced into the

Mechan property has been traced into the Red Rock.

An amusing feature of the month, yet one which may be disastrous in its results, is the fact that dozens of property owners are busily circulating the report that John Hays Hammond, the New York mining expert, on his recent visit to the camp, examined their particular property and was very enthusiastic as to its wonderful possibilities. If all these statements were worthy of credence Mr. Hammond would have had work enough to keep him busy for six weeks in examining properties here. However, as a matter of fact the noted engineer never made but one visit to the camp—was here less than sixty hours—came for the purpose of examining the Nipissing property at the request of the Guggenheim company and has made no report relative to any other property in the camp.

Total shipments for October were the largest.

report relative to any other property in the camp.

Total shipments for October were the largest in the history of the camp. Forty garloads of ore, a total of approximately 1,200 tons, were shipped out. Of these the Nipissing shipped twenty-two, the next largest shipper being the Buffalo, with four cars. The Nipissing shipments alone were considerably in excess of \$800,000, and the weekly output of the mine is steadily increasing.

Dr. Robert Bell, chief of the Canadian Geological Survey, has just left camp. This is Dr. Bell's sixth visit to Cobalt, and each time he expresses himself as more enthusiastic than ever with regard to its possibilities. In common with Prof. W. G. Miller, Provincial Geologist, and other scientists of note, who have made a careful study of Cobalt, Dr. Bell is surprised at the exceedingly rapid development of its principal working mines.

The Realty Auction Market The Realty Auction Market.

The unseasonable dulness which has been prevailing in the auction market for the past three weeks was again reflected in last week's budget. Very little business was transacted in the Vesey street salesroom, only four parcels going under the hammer. Two of the offerings were West Side dwellings, the other sales affected vacant property in The Bronx.

The outlook for the present week is more favorable. The most important offering in some time, affecting thirty odd lots in the Dyckman tract, is scheduled for Wednesday. The list includes several valuable corners on Nagle avenue, Ellwood street and Ninth avenue. In addition to a number of miscellaneous parcels, a majority of which are in The Bronx, the schedule also includes a four story loft building on Twenty-third street.
